nfo" NeroBackup\_2019.nfo "NeroBackup\_2019.nfo" Any help is greatly appreciated. Thank you in advance. A: If you use SET /? you get a list of options and their descriptions, however you could use the echo command for a list of text, and a single for a list of numbers. You might be surprised by the results: SET /? Title Author Degree Date of Award 2017 Degree Type Thesis School School of Physical and Mathematical Sciences Faculty Department of Biological Sciences First Advisor Bruce S. Mackenzie Abstract The Indian Ocean and its surrounding seas are host to a large number of species of planktonic foraminifera, most of which are tropical. Foraminiferal assemblages are traditionally used for the estimation of past physical and biological changes in the ocean and thus for studying past climatic conditions, including temperature and salinity. An additional advantage of foraminiferal assemblages is the preservation of higher taxonomic level information, which is recorded in the morphology of individual species. We investigated the taxonomic diversity, distribution, abundance and density of foraminifera in an area of the Indian Ocean, near Timor, north-west of Australia, as well as their responses to environmental changes such as sea surface temperature (SST) changes. The two most abundant species were *Trichocapsa oceanica* and *Elphidium excavatum*, which together accounted for 95% of all identified species. Their abundance increased in warmer waters, although only by up to 1.2‰ per °C. Other species were less abundant and their responses to changes in temperature were less consistent, mainly due to the high sensitivity of these species to salinity changes. A sub-annual temperature variability was also detected in many species, with some of them reaching their highest abundance in winter and decreasing in summer. A maximum depth of 200 m was reached by *T. oceanica* in January. A total of 23 species were identified, including for the first time in the region, *Elphidium dugesii*, *Dactylospira cilindrica*, *Dactylospira elegans* and *Tripyropora sigmodont* 82157476af
